

WIDE BAR SDL PROGRAM

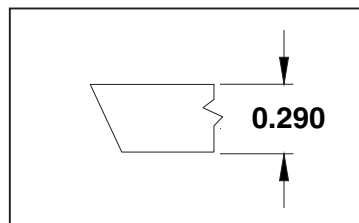

FRONTLINE'S NEW WIDE BAR OPTIONS PROVIDE DESIGN DIVERSITY IN A BEAUTIFULLY DURABLE WAY

THE FRONTLINE ADVANTAGE

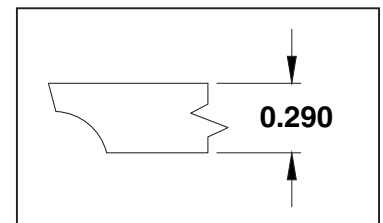

- Unlike our competitors' PVC and composite bars, FrontLine's® unique Aluminum SDL bars provide minimal expansion and contraction.
- 1-1/8" pieces of tape are applied to both edges of the bar to eliminate dirt and debris build-up behind the bar.
- 3M™ VHB™ Tape is standard for superior adhesion.
- Manufactured and sold as cut-and-ready kits for easy application.
- Installation packets with detailed instructions and cleaning wipes are provided with every SDL kit to ensure maximum adhesion.
- To set you up for success, FrontLine® provides detailed shop training on best practices for the application of our Aluminum SDL Bars.
- End details to match the frame (angled or coped) for all major door manufacturers like Thermo-Tru, Masonite and ODL to provide high quality fit and finish.
- Available in painted white, vinyl-wrapped Oak or VG Fir.
- Anodized finishes and custom paint options are available.
- Vinyl-wrapped bars have woodgrain characteristics and are paintable or stainable.
- In-stock and ready to ship quickly for you and your customers. See our list price book for stocking options.
